

# BETTER PATH TO PERSISTENT GROWTH

For many investors, corporate earnings are often the primary focus for evaluating stocks. But earnings only tell a partial story. We think there's a better way to identify businesses that can generate long-term growth.

## BUSINESS RETURNS LEAD THE WAY

### COMPANIES WITH HIGH RETURN ON ASSETS HISTORICALLY OUTPERFORM OVER THE LONG TERM

Hypothetical Growth of \$100

Through December 31, 2017

**Past performance does not guarantee future results.**

Based on the Russell 1000 Growth universe, indexed to 100 on January 1, 1992. Returns shown are for the 20% of stocks in the universe with the highest return on assets (ROA) and the highest earnings per share (EPS) growth over trailing years.

Source: Russell Investments and AB

- + As growth investors, we believe that the most insightful measure of looking at business profitability is through fundamental returns, or return on assets (ROA)<sup>1</sup>
- + For over three decades, US stocks with high ROA have consistently outperformed stocks with high earnings per share (EPS) growth—as well as the Russell 1000 Growth Index
- + Our AB Large Cap Growth Fund has historically had one of the highest ROA measures in its peer group over time, resulting in long-term outperformance

<sup>1</sup> Return on assets (ROA) is an indicator of how profitable a company is relative to its total assets, and gives an idea as to how efficient management is at using its assets to generate earnings. Calculated by dividing a company's annual earnings by its total assets, ROA is displayed as a percentage.

Percentile Rank (%)	8	26	13	1	7	15	77

The performance shown represents past performance, and does not guarantee future results. Current performance may be lower or higher than the performance information shown. You may obtain performance information current to the most recent month-end by visiting [www.abfunds.com](http://www.abfunds.com). The investment return and principal value of an investment in the Fund will fluctuate, so that your shares, when redeemed, may be worth more or less than their original cost. Returns for other share classes will vary due to different charges and expenses. Performance assumes reinvestment of distributions and does not account for taxes. If applicable, high double-digit returns are highly unusual and cannot be sustained; such returns are primarily achieved during favorable market conditions.

\* Past performance does not guarantee future results. Morningstar ratings are specific metrics of performance and do not represent absolute performance of any fund. For each fund with at least a three-year history, Morningstar calculates a Morningstar Rating based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance, placing more emphasis on downward variations and rewarding consistent performance. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a fund is derived from a weighted average of the performance figures associated with its three-, five- and ten-year (if applicable) Morningstar Rating metrics. Morningstar rating is for the share class noted only; other share classes may have different performance characteristics. © 2018 Morningstar, Inc. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

† Morningstar rankings are only one method of evaluating a fund's performance. Morningstar rankings are based on total-return and risk-adjusted performance (Advisor Shares). Morningstar averages represent the average returns of funds contained in the Large Cap Growth category versus the primary prospectus benchmark. Funds within the category generally have similar investment objectives, although some may have different investment policies.

‡ If applicable, this reflects the Adviser's contractual waiver of a portion of its advisory fee and/or reimbursement of a portion of the fund's operating expenses. Absent reimbursements or waivers, performance would have been lower.

The **Russell 1000 Growth Index** represents the performance of large-cap growth companies within the US. An investor cannot invest directly in an index, and its performance does not reflect the performance of any AB portfolio. The unmanaged index does not reflect fees and expenses associated with the active management of a portfolio.

**Investors should consider the investment objectives, risks, charges and expenses of the Fund/Portfolio carefully before investing. For copies of our prospectus or summary prospectus, which contain this and other information, visit us online at [www.abfunds.com](http://www.abfunds.com) or contact your AB representative. Please read the prospectus and/or summary prospectus carefully before investing.**

**Market Risk:** The market values of the portfolio's holdings rise and fall from day to day, so investments may lose value. **Focused Portfolio Risk:** Portfolios that hold a smaller number of securities may be more volatile than more diversified portfolios, since gains or losses from each security will have a greater impact on the Fund's overall value. **Foreign (Non-US) Risk:** Non-US securities may be more volatile because of the political, regulatory, market and economic uncertainties associated with such securities. Fluctuations in currency exchange rates may negatively affect the value of the investment or reduce returns. These risks are magnified in emerging or developing markets. **Derivatives Risk:** Investing in derivative instruments such as options, futures, forwards or swaps can be riskier than traditional investments, and may be more volatile, especially in a down market.
